

QUALCOMM featured a Junxion station within their booth at the CTIA IT & Entertainment trade show hosted by the leading wireless industry organization in September, 2006.

The demonstration, dubbed the Mobile Broadband Network Solution ("MBNS"), exhibited a converged voice and data solution from Sprint, Nortel and Junxion that will help drive incremental sales of Sprint's Mobile Broadband data services. The MBNS was featured due to the market opportunity it represents, particularly with Sprint's upcoming network upgrade to QUALCOMM's EVDO Rev. A.

Sprint and Nortel personnel were on hand to explain the MBNS solution to booth visitors.
