

Greetings,

Three years ago Junxion began with an idea to make wireless data services more accessible. Today, US wireless carriers are promoting data service offerings with wireless WAN routers.

Along the way, Junxion has established and maintained market leadership with 600+ enterprise customers, 150+ Junxion Resellers, and formal certification from two of the top three U.S. wireless carriers.

Junxion is working with our carrier partners' product marketing and enterprise/government sales teams to bring new wireless data solutions to customers. And as this market rapidly evolves, Junxion has worked as a uniquely collaborative partner in response to carrier and customer ideas for enhancing the Junxion Platform™ firmware.

We are grateful to all of our customers and partners who worked outside the boundaries of convention to bring about this evolution in wireless data solutions.

> The Junxion Team

Company

Carrier Certification

Junxion is now certified by both [Cingular Wireless](#) and [Sprint](#) for a wide range of enterprise and government [customer applications](#), including: landline replacement, landline fail-over (back-up), telemetry connectivity, mobile (vehicle) connectivity, remote security and portable networks.

CTIA Wireless 2006

This year at the prominent wireless industry show visitors were greeted by Junxion Box demonstrations at the Sprint (see [booth image](#)), Cingular Wireless (see [booth image](#)) and Ericsson exhibits. RCR Wireless News, the leading wireless industry publication, used a Junxion Box for their primary data connection within their on-site press room.

Junxion Lands Strategic Investment

Trilogy Equity Partners, recently founded by US wireless carrier pioneers, provided Junxion with a boost in both working capital and strategic support. [Click here](#) to read the press release.

Junxion Complete™ Makes Large Installations Easier

The need to simplify large-scale Junxion Box solution deployments for both customers and wireless carrier sales personnel was evident as Junxion began working with Cingular Wireless and Sprint direct sales teams to address sophisticated customer applications. The [Junxion Complete](#) turn-key solution program includes guaranteed installation services from more than 2,200 technicians across the US.

Product

Junxion Launches Firmware Update v1.4

Highlights include features requested by wireless carrier partners and customers, such as: IP passthrough, automatic detection and connection of inserted PC Card modems, and support for Cingular's new Option GT MAX (HSDPA/EDGE/GPRS) PC card modem. [Click here](#) to learn more.

Field Commander™ Simplifies Fleet Device Management

The long-awaited [Field Commander](#) remote management tool was developed in close collaboration with carrier partners and enterprise customers. As a result, Junxion has set a higher industry standard for feature relevance, simplified deployment and ease of use. Junxion, Sprint and Cingular are now winning large customer opportunities where the ability to remotely monitor, manage and update fleets of Junxion Boxes is invaluable for IT personnel.

Application

Fixed and mobile WWAN data connections for remote surveillance camera deployments

Performance Rating

How do you rate Junxion's performance (1-5): **5**

Value-add Rating

For this application, how much does Junxion increase the value of wireless data service (1-5): **5**

Testimonial

"From a functional perspective, we required a solution that was rugged and sophisticated yet easy to deploy, remotely manage and update as the carrier networks evolve. As a public agency, we also needed a solution that would incur a relatively low total cost. After investigating an array of options, including newly released WWAN routers and incumbent wireless modem solutions, it was clearly apparent that Junxion was the best overall fit for our demands."

"The Junxion Box has added exceptional new functionality to our Surveillance Operations. Every aspect of the device has proven to enhance our 'immediate deployment' scenarios where wireless WAN connectivity is beneficial. Due to its firmware features, dual wireless (3G WWAN / Wi-Fi) capability and physical construction, our quick deployment at various locations has been simplified."

"Beyond the Junxion Box, I also commend the staff at both Junxion and [Junxion Complete partner] Mobile ID Solutions for their outstanding pre-sales technical support. Their responsiveness and care has helped make the Junxion Box a valuable tool for our surveillance arsenal."
